

Enterprise Navigator™

Turn-by-Turn Navigation for Windows Mobile Handheld Computers

Enterprise Navigator turn-by-turn navigation software with voice guidance is designed for enterprise users. It delivers the features enterprises need, plus an API for integration with third-party mobility applications..

> FEATURES

Dynamic Route Guidance: Provides spoken, turn-by-turn directions to any address nationwide.

Automatic Route Recalculation: Directions are updated every second. If you miss a turn, you get new directions immediately.

Voice Prompts: Clear voice instructions give you the exact distance to your next turn and the type of turn.

Map Display: Clean, clear graphics show maneuver instructions and other information.

Driving Safety: Configure Enterprise Navigator to avoid U-turns and set alerts to warn driver when the speed limit is exceeded.

Auto-Zoom: Map automatically zooms in as driver approaches the next maneuver.

Time and Distance: ETA/Distance to destination.

Points-of-Interest: Access to points-of-interest including fuel stations, restaurants and more that can be made available to drivers, or locked out.

Custom Points-of-Interest: Import your customers, stops or other landmarks.

Simplified Installation and Licensing: Designed for enterprise deployments.

Map Availability: Europe, Middle East and others. Contact MobileWorxs for more information.

Language Support: European languages based on map coverage, Arabic and others. Contact MobileWorxs for more information.

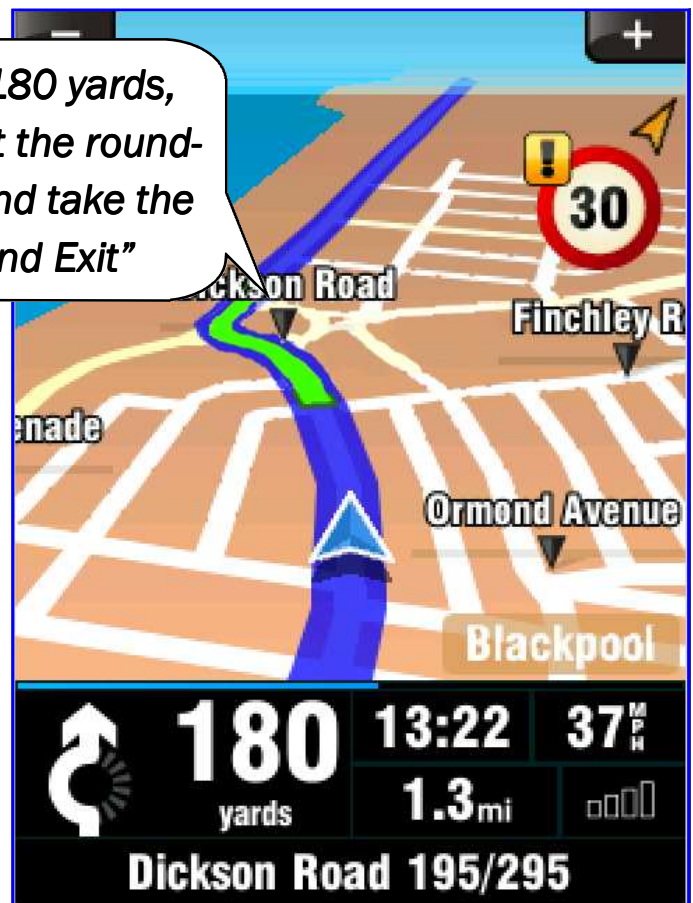

> INTEGRATION

API for integration with third party applications:

- Supports C++ and .NET development environments including C#, Visual Basic, etc...

For more information on Enterprise Navigator, contact MobileWorxs at sales@mobileworxs.com or +44 (0)1905 799555

"After 180 yards, go left at the round-about and take the second Exit"

- Control Destination input, Configurations, etc...

> BENEFITS

- Developed for enterprise users
- Reduce unnecessary mileage and fuel costs by providing accurate driving directions
- Improve on-time performance as drivers are less likely to get "lost" or follow inefficient routes
- Increase safety with "Eyes free" voice interface
- Reduce vehicle engine idling time as drivers lookup customer locations on maps
- Shorten training time for new drivers

> TECHNICAL INFORMATION

- Windows Mobile 5/6; Windows CE 5
